

PryorMark 2068 EG Integrator

HAPRA
MARKING SYSTEMS

The 2068 EG is the system designed for use in production lines and severe industrial conditions. The moving shutter surrounding the solenoid prevents the entry of ambient debris and coolant.

The INTEGRATOR is the low cost, flexible solution for today's in-line marking problems.

It is the better way to mark.

FEATURES:

- Capable of running manually or in automatic mode
- Leadscrew positioning
- Powerful, self-contained system that does not require a dedicated PC. This unit is well suited for industrial environments. A Windows™-based software package is available, if required.
- Straight, angular, circular, and radial marking capability to accommodate a variety of part shapes and sizes with quick changeover from part to part
- Large LCD screen provides a clear view of the user-friendly program
- Marks parts up to 65Rc
- Heavy-duty construction for maximum rigidity
- Single, regrindable stylus for marking all character sizes
- Job function in multiple increments to facilitate setup
- Preview the created layout before marking
- RS-232 serial communication
- Create logos with internal generator or download HPGL files from remote sources
- Automatic serialization
- Marking windows (envelope) of standard 2" x 2", or special 4" x 3"
